

PROPERTIES | 2014 SUSTAINABILITY REPORT
DATA PACK

INTRODUCTION

This report provides data on the performance of Majid Al Futtaim Properties. It fulfils our aspiration to Lead by Example through increasing the transparency of our reporting. To achieve this aspiration, we report on data that is material to our operations and Sustainability Policy using consistent methodologies and, where relevant, declaring all assumptions, estimation, conversions, restatements and exclusions.

This report supplements the key performance indicators and progress declared against long term targets disclosed in our 2014 Sustainability Report “Building from the Ground Up”. Effective environmental performance management is delivered under *High Performance Assets*, one of our three sustainability focus areas. A selection of key performance indicators delivered under the *Pioneering Standards* and *Prosperous Communities* focus areas is included in the KPI section of this pack.

ALL REPORTING

Reporting Period

All data in this report covers our latest reporting year, which is the 2014 calendar year, and our three previous reporting years (2013, 2012 and 2011).

Restatements

Restatements of previous years data have been made where data quality and completeness has improved.

Estimation

No significant estimation has been made to the energy, emissions, water and waste data reported.

RESOURCE EFFICIENCY REPORTING

Best Practice

This report is aligned with the European Real Estate Association (EPRA) Sustainability Best Practice Reporting Guidelines and the evolving requirements of the Global Real Estate Sustainability Benchmark (GRESB).

Scope

The absolute environmental data in this report covers 100% of the floor area of the assets over which we have operational control.

Floor area is measured by Net Lettable Area for the majority of assets, but by Gross Internal Area for the Hotels portfolio because the majority of space is used by guests in this asset type.

We report on electricity use in our assets, which also includes the majority of tenant electricity consumption as we purchase electricity on our tenants' behalf and recharge them.

We purchase a small amount of gas in our hotel assets for cooking purposes. However this amount is converted to an equivalent electricity consumption using the Avireal methodology for reporting on energy consumption at hotels.

We report on our material carbon emissions in line with the Greenhouse Gas Protocol Scope 1, 2 & 3 categories. This currently excludes our employees' business travel, whereas emissions from our construction sites are measured and reported on separately from our operational emissions.

INTRODUCTION continued

Boundaries

We report on properties where Majid Al Futtaim Properties has operational control. This means that we only report on properties where we have some form of management control, such as property management, and excludes properties where we have a financial investment but no managerial control. This means that we report on the properties where we are directly responsible for their impacts and performance.

The report covers the following countries where we have operational assets: United Arab Emirates, Bahrain, Oman, Egypt and Lebanon.

Data Qualification Notes

- The reported 'Exclusive tenant consumption' is consumption on a sub-metered and/or metered basis only.
- Tenants' consumption for Egypt (Maadi and Alexandria city centres) is that which is obtained directly by the tenant of the buildings themselves.
- The only office reported on for the years 2011, 2012 and 2013 is Majid Al Futtaim Properties' Head Office Tower 2. We began measuring and reporting our other three owned offices in 2014.
- The Matajer malls were purchased and therefore began reporting in 2013. My City Centre Nasseriya opened in 2014.
- Majid Al Futaim Properties two furnished hotel apartments which are not reported on.
- Our community development in Sharjah, UAE, Al Zahia (Phase 1) was included in reporting. Other community developments were excluded because they are either still in development (Lebanon Waterfront City) or because we do not have operational control (Al Mouj Muscat).

Emission and conversion factors

Emissions factors for 2014 have been taken from the latest DECC/DEFRA UK Government conversion factors for Company Reporting (<http://www.ukconversionfactorscarbonsmart.co.uk>). The DEFRA factors have been selected for use as they are considered to be the most accurate and regularly updated source of conversion factors available for the regions in which Majid Al Futtaim Properties operates.

The emission factors used are declared at the bottom of each table.

Where other conversions are made, they are made using internationally agreed factors.

Data collection

At the majority of buildings, meter readings are taken automatically through the Building Management System ("BMS") and manual reads are also taken to verify automatic readings or close any gaps. Data is checked and verified at the building level by our Asset Managers and Facilities Managers (Enova) and at the portfolio level by Majid Al Futtaim Properties staff and our sustainability advisors, JLL.

Data Qualification Notes:

- * 'Exclusive tenant consumption' is on a sub-metered and/or metered basis only.
- * 'Applicable properties' does not include properties that were not in full operation during the relevant year (e.g. Bahrain Mall opened during 2013, Dubai City Centre Hotel under renovation in 2011 and 2012, Kempinski Grand Bahrain City Centre opened in 2013, Fujairah City Centre opened in 2012, Mirfah City Centre opened during 2010, Ibis Rigga and Sheraton Mall of the Emirates opened in 2011), and the Matajer Malls were purchased during 2013.
- * Our two furnished hotel apartment properties are not reported on.
- * Progress towards hotel energy and water intensity targets is calculated using the Avireal Genuine Performance benchmark, an advanced intensity calculation that takes into account a variety of factors including guest nights, food and beverage covers and degree days. We report here a simpler intensity metric for greater comparability with other company portfolios.
- * The EPRA energy intensity performance figures differ from Majid Al Futtaim Properties's energy performance target as that indicator is a like-for-like target based on a 2010 baseline whereas the EPRA indicator includes new properties from the first full year they are present in the portfolio.
- * Emissions factors for all reporting years are obtained from the UK's DEFRA.

* by property type and region
